General Description

The HMC667LP2(E) is a GaAs PHEMT MMIC Low Noise Amplifier that is ideal for WiMAX, WLAN and fixed wireless receivers operating between 2300 and 2700 MHz. This self-biased LNA has been optimized to provide 0.75 dB noise figure, 19 dB gain and +29.5 dBm output IP3 from a single supply of +5V. Input and output return losses are excellent and the LNA requires minimal external matching and bias decoupling components. The HMC667LP2(E) can also operate from a +3V supply for lower power applications.

[2] Circuit Board Material: Rogers 4350

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
