Notes:

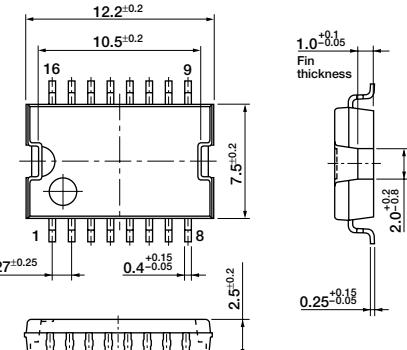

*2: Refer to Dropout Voltage.

*3: Since P_{D(max)} = (V_{IN}-V_{O1}) × I_{O1} + (V_{IN}-V_{O2}) × I_{O2} + (V_{IN} × I_Q) = 22W, V_{IN(max)}, I_{O1(max)} and I_{O2(max)} may be limited depending on operating conditions.

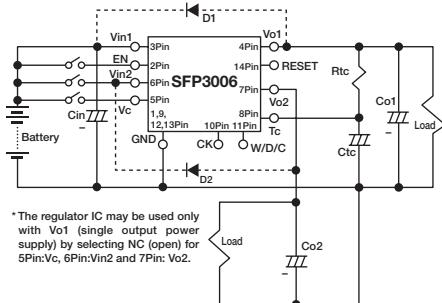

*4: The RESET terminal is pulled up in the IC; may be directly connected to logic circuits.

*5: The thermal protection function is built in V_{O1} (CH1 side) only. The design thermal protection starting temperature is 151°C (min.) and 165°C (typ.). These values represent the design warranty.

External Dimensions (unit: mm)

Standard Connection Diagram

*The regulator IC may be used only by with Vo1 (single output power supply) by selecting NC (open) for 5Pin:VC, 6Pin:Vin2 and 7Pin: Vo2.

Cin: Capacitor (39μF) for oscillation prevention

Co1: Output capacitor (39μF)

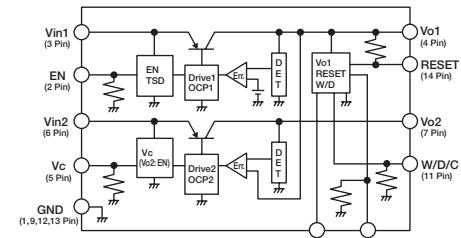

Co2: Output capacitor (39μF)

Tantalum capacitors are recommended particularly for low temperatures (tantalum capacitors of about 0.47μF in parallel).

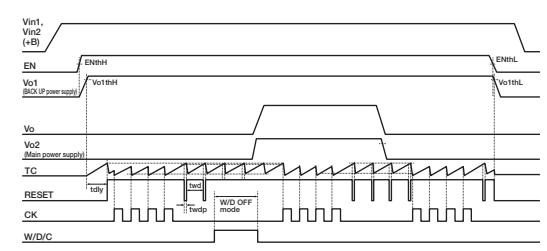

D1, D2: Protection diodes.

Required for protection against reverse biasing between input and output (Recommended diode: SANKEN EU2Z).
